ENGINEERING AND MINING JOURNAL

INDEX TO VOLUME CIII

January 1 to June 30, 1917

EXPLANATORY NOTE

Illustrated articles are denoted by an asterisk (*); book notices by a dagger (†).

This index is made comprehensive but concise. Pains are taken to bring together matter belonging to the same subject, so that when a reader looks up an article he will be cited to related data. Under these conditions some further explanation of the method will be useful in finding leading articles quickly. Series of simple page numbers following names of mines or companies usually refer to news notes and other lesser matters. Descriptive articles are appended under titles (often abbreviated) beginning with dashes. When the minor references are numerous, as in the case of "Anaconda," they are sometimes separately designated as "notes." The unspecified entries may, however, be important; for instance, an editorial or other article may be entitled simply by a proper name. With a major entry or series of entries may be placed several minor ones relating to the same subject in order that its history may be followed. The asterisks denoting illustrated articles assist in finding them and if the author's name be known, it is the simplest means of reference. Productions are indexed under names of metals and countries or states, in important cases under both. The mere juxtaposition of a mineral and geographical name usually signifies an output but may cover other statistical or news matter. Not all news notes are indexed, but a liberal selection of them is made.

Following is a list of the pages included in the several numbers of the volume, by date:
